Occupation: Writer  
Other Names: Hemingway, Ernest Miller

ERNEST Hemingway ranks as the most famous of twentieth-century American writers: like Mark Twain, Hemingway is one of those rare authors most people know about, read him or not. The difference is that Twain, with his white suit, ubiquitous survives in the public imagination as a basically lovable figure, while the image of Hemingway as rugged and macho has been much less universally fame, Hemingway has been regarded less as a writer dedicated to his craft action who happened to be afflicted with genius. When he won the Nobel magazine reported the news under *Heroes* rather than *Books* and went on author as "a globetrotting expert on bullfights, booze, women, wars, big game sea fishing, and courage." Hemingway did in fact address all those subjects acquired his expertise through well-reported acts of participation as well as going to all the wars of his time, hunting and fishing for great beasts, marrying occasionally getting into fistfights, drinking too much, and becoming, in the celebrity recognizable for his signature beard and challenging physical pursuits.

PAPA HEMINGWAY

To a considerable degree, Hemingway was complicit in the formation of his a young man living in Chicago and bored by pretentious drawing room talk artists, he rejected out of hand the role of the epicene indoor aesthete. If he writer, it was going to be at the opposite pole from Proust and his cork-lined Hemingway had grown up in close touch with the outdoors, and throughout the sports afield and astream that he had learned from his father. In doing undoubtedly took some pleasure in confounding public expectations about

### 碳足迹

碳足迹是指由于个人的生活方式，公司的运营或产品或服务的整个生命周期而直接或间接产生的温室气体排放总量。

自1990年代后期以来，碳足迹一词已广泛用于有关应对全球气候变化的个人和企业责任的公开辩论中。它的普遍存在很大程度上是因为它似乎是使个人或公司的二氧化碳 (CO<sub>2</sub>) 排放商品化的简便方法。

尽管经常使用该术语，但该术语尚无明确的科学定义，并且仍存在混淆 关于其实际含义和措施。定义范围从直接二氧化碳排放到整个生命周期的温室气体排放。

英国国会科学技术办公室将碳足迹定义为：“2个以及整个过程或产品的整个生命周期中排放的其他温室气体。它表示为每千瓦时二氧化碳当量的克数 (gCO<sub>2</sub>e/kWh)，这解释了其他温室气体对全球变暖的不同影响。”由于促成二氧化碳排放的过程以复杂的方式相互影响，因此英国科学家Laurence Wright, Simon Kemp和Ian Williams建议对碳足迹进行更具包容性的定义，同时考虑到特定人口的二氧化碳和甲烷排放，系统或活动。

尽管定义不同，但碳足迹旨在衡量人和产品对地球的影响。碳足迹概念的部分吸引力在于，它为个人或组织对温室气体排放的贡献和责任做出了明确的标记。该术语之所以如此迅速地进入生态词典的另一个原因是，它为有责任心的个人和公司提供了一个可以抵消的数字，一旦实体意识到其碳足迹，便可以采取措施减少其碳足迹。

Despite its frequent popular use, there is no clear scientific definition of what the term actually means and measures. Definitions range from individual's lifestyle, a company's operations, or the full life cycle of a product or service to the total amount of greenhouse-gas emissions that result directly from an individual's lifestyle, a company's operations, or the full life cycle of a product or service.

Since the late 1990s, the term *carbon footprint* has become widely used in the public debate on individual responsibility in response to global climate change. Its ubiquity is largely because it appears to be a simple way to commodify an individual or company's carbon dioxide (CO<sub>2</sub>) emissions.

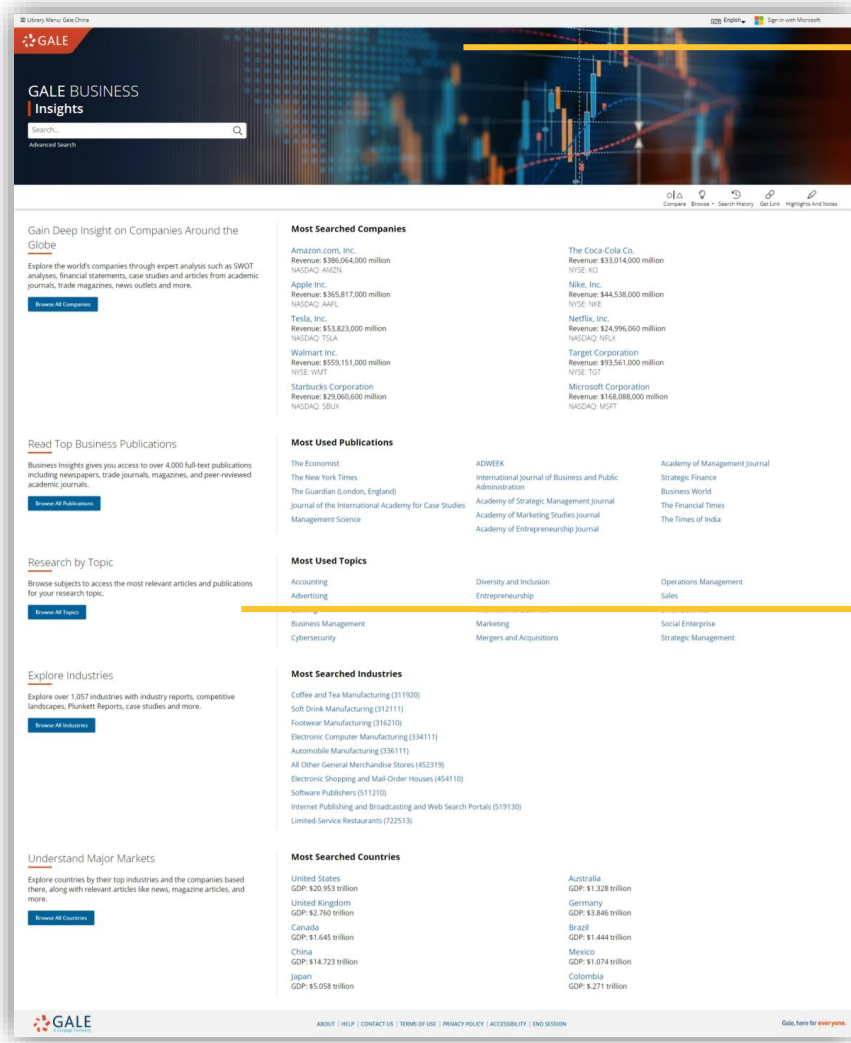

Despite its frequent popular use, there is no clear scientific definition of what the term actually means and measures. Definitions range from individual's lifestyle, a company's operations, or the full life cycle of a product or service to the total amount of greenhouse-gas emissions that result directly from an individual's lifestyle, a company's operations, or the full life cycle of a product or service.

The United Kingdom Parliamentary Office for Science and Technology defines a carbon footprint as "the total amount of greenhouse-gas emissions that result directly from an individual's lifestyle, a company's operations, or the full life cycle of a product or service." As the processes contributing to carbon dioxide emissions become increasingly complex ways, British scientists Laurence Wright, Simon Kemp, and Ian Williams suggest a more inclusive definition of carbon footprint, taking into account both carbon dioxide and methane emissions of a given population, system, or activity.

Despite the differing definitions, a carbon footprint is intended to measure the impact of people and products on the planet. Part of the attraction of the concept of a carbon footprint is that it gives a clear marker as to an individual or

Company Perspectives

Think different.

One of the most dominant technology companies of the 21st century, Apple Inc. designs, manufactures, and markets smartphones, personal computers, tablets, wearables, and accessories. In addition to the subscription-based services Apple Arcade for games, Apple Music for on-demand radio, Apple News+ for news and magazines, Apple Fitness+ for personalized health monitoring, and Apple TV+ for original television content, the company operates a variety of platforms, including the popular App Store, that allow consumers to download applications and digital content, such as books, games, music, podcasts, and videos. Apple also offers cloud storage services: Apple Pay, a cashless payment service; and Apple Card, a credit card issued by Goldman Sachs. The world's first public company to be worth \$1 trillion, Apple is the world's most valuable brand.

Origins: 1976

Apple was founded in April 1976 by Steve Jobs, then 21 years old, and Steve Wozniak, 26, both college dropouts. Their legendary partnership had begun several years earlier when Wozniak, a talented, self-taught electronics engineer, started building boxes that allowed him to make free long-distance phone calls. The two friends sold several hundred of those boxes.

In 1976 Wozniak was working on another box, the Apple I computer, without keyboard or power supply, for a computer hobbyist club. Jobs and Wozniak sold their most valuable possessions, a van and two calculators, raising \$1,300 to start Apple Computer. A local retailer ordered 50 of the computers, which were built in Jobs's garage. They eventually sold 200 to computer hobbyists in the San Francisco Bay area for \$666 each. Later that summer Wozniak began work on the Apple II, a machine designed to appeal to a wider market than computer hobbyists. Jobs hired local computer enthusiasts, many of them still in high school, to assemble circuit boards and design software. Early microcomputers had typically been housed in metal boxes. With the general consumer in mind, Jobs planned to house the Apple II in a more attractive modular beige plastic container.
